

How To Edit Logo Template in Photoshop

1. Choose the logo that you want. See the “Logo Catalog” to find the logo you want. For example I choose “Minimal Logo 003”.
2. Open the folder “Minimal Logo Pack”.
3. Download and install fonts that listed in “Minimal Logo 003.txt”. (Don’t need to do this if you has been downloaded all fonts listed in “All Font Links”)
4. Open “Minimal Logo 003.psd” with photoshop.
5. The size of the document is 1000x1000 Pixels. You can change the size of the document as you want. Go to Image > Image Size. And change the size bigger or smaller as you want. Or you just can use crop tool (Press C).

6. The default color mode on this document is RGB (For Web). You can change it to CMYK if you want to use this logo for print. Go to Image > Mode > Change RGB to CMYK > Don't Merge.
7. Edit the text using "Horizontal Type Tool" (T)
8. To change the shape color, just double click on the thumbnail of shape layer "Shape 1" and select your color.

9. Happy Design 😊
